# RNA-Seq Normalization in Babelomics 5 

Marta R. Hidalgo

September 29th, 2016

GDA
International Course on
Genomic Data Analysis

## Outline

1 Introduction

2 Biases

3 Normalization methods

4 Normalization in Babelomics 5

5 Exercises

## Introduction

## Introduction

What do we get? A counts matrix (integer data)

## Introduction

## Why normalizing?

- The technology introduces different biases
- We need to remove them to compare
- Among genes in a sample
- Among samples

## Biases

## Biases

(1) Gene length
(2) Library depth (3) RNA composition

## (4) Others

|  |  |  |
| :--- | :--- | :--- |
| A1BG | 203 | 698 |
| A1CF | 0 | 0 |
| A2BP1 | 398 | 245 |
| A2LD1 | 89 | 149 |
| A2M | 55336 | 76480 |
| A2ML1 | 67 | 3 |
| A4GALT | 59 | 870 |
| A4GNT | 2 | 1 |
| AAA1 | 2 | 0 |
| AAAS | 759 | 1061 |
| AACS | 784 | 566 |
| AACSL | 1 | 2 |
| AADAC | 0 | 1 |

## Gene length

Larger genes get more reads

## Biases

(1) Gene length
(2) Library depth
(3) RNA composition

4 Others

## Gene length

Larger genes get more reads

## Biases

(1) Gene length
(2) Library depth
(3) RNA composition

4 Others

## Gene length

Larger genes get more reads

length $=3 \square$ AACS

## Biases

(1) Gene length

2 Library depth
(3) RNA composition Others

## Gene length

Larger genes get more reads

length $=3$

## Biases

(1) Gene length
(2) Library depth
(3) RNA composition Others

## Gene length

Larger genes get more reads

length $=3$

## Biases

(1) Gene length
(2) Library depth (3) RNA composition (4) Others

## Library depth

Deeper libraries give more reads

## Biases

(1) Gene length

2 Library depth
(3) RNA composition

Level of expression

Sample 1 Sample 2

## Biases

(1) Gene length

2 Library depth
(3) RNA composition
(4) Others

## Others

- GC-content
- Dinucleotide frequencies

## Normalization methods

## Normalization methods

(1) Gene length

2 Library depth
(3) RPKM

TMM
(5) Quantiles

Gene length
Divide by gene length

## Normalization methods

(1) Gene length

2 Library depth
(3) RPKM
^ TMM
(5) Quantiles

Divide by gene length

## Gene length

divide by length $=3$

## Normalization methods

(1) Gene length

2 Library depth
(3) RPKM
a TMM
(5) Quantiles

Divide by gene length

## Gene length

## Normalization methods

(1) Gene length

2 Library depth
(3) RPKM
(4) TMM

## (3) Quantiles

## Library depth <br> Divide by library depth

## Normalization methods

(1) Gene length

2 Library depth
(3) RPKM
(4) TMM

## (3) Quantiles

## Library depth <br> Divide by library depth

## Normalization methods

(1) Gene length
(2) Library depth
(3) RPKM

TMM
Quantiles

$$
\mathrm{RPKM}=\frac{\text { total exon reads }}{\text { mapped reads }(\text { millions }) * \text { exon length }(K B)}
$$

## Normalization methods

(1) Gene length
(2) Library depth
(3) RPKM
(4) TMM

Quantiles

Level of expression

Sample 1
Sample 2

## Normalization methods

(1) Gene length
(2) Library depth
(3) RPKM
(4) TMM

Quantiles

Level of expression

Sample 1
Sample 2

## Normalization methods

(1) Gene length
(2) Library depth
(3) RPKM
(4) TMM
(5) Quantiles

## Quantiles

Makes all sample distributions the same

Normalization in Babelomics 5

## Normalization in Babelomics 5

Available normalization methods in Babelomics 5
(1) RPKM (gene length required)
(2) TMM
(3) TMM with gene length correction (gene length required)
(4) Automatic selection of the method based on the diagnostic test for differences in RNA composition from NOISeq

## Normalization in Babelomics 5

Where can we find RNA-Seq normalization in Babelomics 5?
Babelomics 5 Processing $\vee$ Expression $\vee$ Genomics $\vee$ Cancer $\vee$ Functional $\vee$

## Exercises

## Normalization exercises

## Exercise 1

Perform a normalization of the breast cancer data in the file brca_demo_counts_4babelomics.txt

## Exercise 2

We will use a Kidney Renal Clear Cell carcinoma (KIRC) dataset from the TCGA
(1) Go to the GDA 2016 wiki
(2) Download the kirc_demo_counts_4babelomics.txt
(3) Upload this file to Babelomics 5
(4) Normalize the data

For help, ask or visit the normalization tutorial
